

Flo-Flavour™ Plus – Flavour Application System

We are pleased to announce the latest development in the proven Flo-Flavour™ range of snack seasoning systems.

The latest Flo-Flavour™ Plus system uses separate oil and flavour applications and can be used to compliment, or as an alternative to, the traditional oil/flavour slurry system usually associated with the Flo-Flavour™ system.

Key Features of Flo-Flavour™ Plus

- Air atomising nozzle allowing low volumes of oil to be applied with excellent dispersion
- Variable speed screw feeder with independent agitator ensuring consistent feed of conditioned flavour
- Vibratory curtain feeder discharging the flavour evenly across a fine curtain
- Ultrasonic bed depth sensor with plc based controller to monitor the rate of product, thus maintaining strict proportional control of oil and flavour application
- A range of sizes and applications are available upon request

The combination of the elements ensure a consistently flavoured product with correct application of oil and flavouring. Making sure what's in the bag is what it says on the bag!

By maintaining proportional control of the oil and flavour application the product quality can be maintained and over-use of expensive ingredients controlled. The whole system is designed for easy cleaning and rapid product changes.

For more information on how the Flo-Flavour™ Plus system can add value to your operations please contact us.

Maintaining your product quality!
